Sales Enablement OKR Examples

Swipe for more

Objective	Key result	How to measure it	Why it's important
1. Increase Competitive Win Rate	• Boost win rate against top X competitors from X% to Y% by the end of Q(#1/2/3/4). • Improve overall win rate by X% within the next Y quarters.	• Analyse win-loss data from CRM systems. • Track win rates specifically against identified top competitors.	Higher win rates against competitors indicate effective sales enablement and messaging, leading to increased revenue and market share.
2. Reduce Sales Cycle Length	• Decrease average time to close deals from A days to B days by end of quarter. • Shorten time between sales stages by X% within Y months.	• Monitor timestamps in CRM for each deal stage. • Calculate average time from lead to close before and after enablement initiatives.	Shorter sales cycles accelerate revenue generation and improve sales efficiency, allowing reps to close more deals in less time.
3. Enhance Sales Team Product Knowledge and Confidence	• Achieve an average confidence score of X/10 in quarterly sales surveys by Q(#). • Ensure X% of sales reps pass product certification tests by Q(#).	• Conduct regular surveys asking sales reps to rate their confidence. • Include quizzes or certifications post-training sessions. • Track completion rates and scores in the LMS.	Confident sales reps are more persuasive and effective in customer interactions, leading to higher conversion rates and better customer experiences.

Objective	Key result	How to measure it	Why it's important
4. Increase Collateral Usage by Sales Team	- Boost usage of sales enablement materials by X% over the next quarter. - Increase views and downloads of key materials from X to Y per month.	- Track views, downloads, and shares of content. - Analyse which materials are most and least used. - Monitor pre- and post-enablement metrics.	Higher content usage indicates that sales reps find the materials valuable, leading to more consistent and effective messaging in the field.
5. Reduce Time to Ramp for New Sales Reps	- Shorten new sales reps' time to first deal from X days to Y days within the next [year]. - Decrease time to full quota attainment from X to Y months.	- Track onboarding progress through LMS completion rates. - Monitor time from hire date to first closed deal in CRM. - Assess proficiency through role-playing exercises.	Faster ramp-up times get sales reps productive sooner, increasing overall team capacity and reducing onboarding costs.
6. Improve Sales Adoption of New Messaging	Achieve X% adoption rate of new product messaging in sales conversations within Y months of launch.	- Gather quantitative data via call listening tools to track mentions of key messaging. - Gather qualitative feedback from sales managers and reps.	Ensures that the latest and most effective messaging is consistently delivered to customers, improving brand consistency and deal success rates.

Objective	Key result	How to measure it	Why it's important
7. Increase Lead-to-Opportunity Conversion Rate	• Increase lead-to-opportunity conversion rate from X% to Y% over the next X months. • Improve MQL to SQL conversion by X% by Q(#).	• Analyse funnel metrics in CRM systems. • Compare conversion rates before and after enablement initiatives.	Higher conversion rates indicate that sales reps are effectively engaging leads, improving pipeline health and potential revenue.
8. Boost Average Deal Size	• Grow average deal size by X% in the next year. • Increase average contract value from \$X to \$Y by year-end.	• Track average contract value in CRM. • Monitor upsell and cross-sell rates. • Analyse the impact of value-based selling training on deal sizes.	Larger deal sizes contribute directly to revenue growth and indicate successful value communication by sales reps.
9. Increase Competitive Knowledge Retention	• Ensure X% of sales reps score above Y% in competitive knowledge assessments quarterly.	• Conduct regular quizzes or certifications on competitive information. • Use LMS to track assessment scores. • Provide additional training if needed.	Deep competitive knowledge allows sales reps to effectively position against competitors, increasing the likelihood of winning deals.

Objective	Key result	How to measure it	Why it's important
10. Enhance Cross-functional Collaboration	- Facilitate meetings between product marketing and sales with X% attendance. - Complete X joint projects by year-end.	- Schedule regular alignment meetings. - Track attendance and participation rates. - Collect feedback on the usefulness of the meetings.	Strong collaboration fosters better alignment on goals, messaging, and strategies, leading to more cohesive efforts and better results.
11. Improve Sales Feedback Loop	Implement a feedback system where X% of sales reps submit at least one piece of feedback [monthly].	- Set up channels for feedback (e.g., survey forms). - Monitor submission rates and types of feedback. - Act on feedback and communicate changes back to the sales team.	A robust feedback loop ensures that sales enablement materials remain relevant and effective, continuously improving to meet sales reps' needs.

Take the Profitable PMM Challenge

KPI to avoid	Reason why it's bad	Suggestion or better alternative
1. Metrics not directly linked to revenue	They don't align with revenue generation and may not establish leadership or priorities. Examples include site traffic, asset downloads, and content creation.	Focus on outputs that align with key initiatives and contribute directly to revenue and business goals. See my previous OKRs post for some inspiration, or comment below for a link!
2. NPS, LTV, and/or net retention	These metrics are influenced by multiple factors outside our control, making it difficult to attribute success directly to PMM efforts.	If tackling these, design intentional programs where the PMM impact can be measured, such as pilot projects aimed at improving customer lifetime value (LTV) and tracking the results over time.
3. Sales-enabled revenue	Too broad with many variables beyond PMM control, such as demand generation and sales team effectiveness. It's too far removed to commit to, and may annoy people if we claim credit for it.	Choose specific metrics within this area that you can influence, like Marketing Qualified Leads (MQLs) or opportunity-to-closed-won rate, where specific tactics can make an impact. A/B test and keep a running data log of improvements.

KPI to avoid	Reason why it's bad	Suggestion or better alternative
4. Task completion	This may sound obvious, but tracking the completion of tasks doesn't measure actual impact and may lead to producing unused content, causing other teams to question PMM's contribution. Examples: briefs, decks.	Doing more doesn't always mean better results. Demonstrate how these tasks contribute to revenue or product adoption. Focus on outcome-based metrics rather than just tracking whether tasks are completed.
5. Website or landing page traffic	It's difficult to attribute increases directly to PMM activities since multiple factors contribute to this metric.	I'd recommend avoiding KPIs that can't be directly linked to PMM influence. Instead, select metrics where PMM contributions are clear and measurable, like testing variations of messaging on different landing pages and seeing what drives demo requests.
6. Number of products or features launched	Launching features doesn't equate to success if they aren't used or valued by customers; it's considered a vanity metric.	Connect KPIs to business value by measuring user adoption, customer satisfaction, or the value derived from launched features to ensure they contribute to business objectives.
